Quelles politiques publiques de demain pour et avec les jeunes des territoires ruraux ?

Distances à parcourir, accès aux services difficiles, dispersion des activités, assignation à résidence, inégalités... nombreux sont les freins rencontrés par les 15-30 ans dans les territoires ruraux, alors que les compétences, sectorielles, sont partagées entre de nombreux niveaux de décisions et d'actions. Pourtant, de nombreuses initiatives éclosent et démontrent le dynamisme et la capacité d'engagement des jeunes dans le dév...

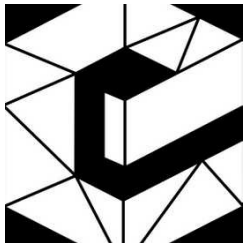

Sustainable Transition of the Rural Economy Through Generational Renewal

27 May 2024 Sustainable Transition of the Rural Economy Through Generational Renewal This project, a collaboration between Maynooth University and Teagasc, funded by the Department of Agriculture Food and the Marine (DAFM), highlights the importance of generational renewal for the sustainability of agriculture in Ireland. Sustainable generational renewal programmes necessitate a dual focus. They ...

Structures of Consumption and Professional Identity: An Analysis of the French Household Budget Survey

Sociology, Ahead of Print. As conventional class categories hide too much pertinent information, there is a growing body of work on lifestyles and consumption patterns of more detailed occupational groups that seeks to distinguish the underlying social structures. While research in Bourdieusian class analysis focuses on class practices, limited attention is paid to agents' strategic interests. Using French household expenditure data, this article explores the structures of consumption, instrumental for professional advancement, within ...

Does off-farm work induce farmland abandonment? Evidence from China

This study investigates whether, how and under what circumstances off-farm work induces farmland abandonment, which is of great importance for developing countries to cope with food security. Exploiting large-scale panel data from the newly released Chinese Family Database, this study employs a two-way fixed effects model to empirically estimate the causal relationship between off-farm work and farmland abandonment. In the context ...

Changing land and labour relations on cocoa farms in Sefwi, Ghana: Continuity and change

Source:WORLD DEVELOPMENT PERSPECTIVES34 (),,10 DOI:10.1016/j.wdp.2024.100584Abstract:Ever since the late 1880s when cocoa began to be grown commercially in Ghana, land and labour has been mobilized to expand the area under cocoa trees and cultivate the crop. The first cocoa farmers ingeniously used and adapted existing social norms for land acquisition and recruitment of labour from both the extended family and from migrants. The resulting development of cocoa was a remarkable story of African innovation and enterprise that made the then ...

Psychosocial risks, sexual harassment and gender-based violence

This course is designed to increase awareness about the importance of considering a gender perspective in the context of occupational health and safety. Specifically, it addresses psychosocial risks, gender-based violence, and sexual harassment in the workplace. By examining these risks' main features, causes, and effects and analysing their impact on women's work organisation and development, participants will be equipped with tools to recognise workplace diversity. The course also offers a...

Stakeholder workshop on monitoring food systems for healthy and sustainable diets & recent research findings on smallholder commercial farming in Rwanda May 16-17, 2024

The fifth Rwanda Agriculture Transformation Strategy (PSTA-5) document is under final vetting by stakeholders before its submission for publication. The PSTA-5 adopts a food systems approach by including a more comprehensive methodology to agriculture ... Source: IFPRI Rwanda – Rwanda Strategy Support Program

Resisting coloniality in agriculture: A decolonial analysis of Florida's agricultural migrant workers' experiences

Abstract The U.S. agricultural sector relies heavily on agricultural migrant workers, and Florida has a history of (im)migrant labor. However, this system is historically rooted in colonization, and its systems of oppression remain. Currently, migrant workers operate in various systems of oppression, including social, health, and environmental inequities, all of which have been worsened by the COVID-19 pandemic. ...

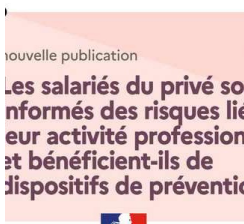

Why health truly is wealth for farmers

Farmers need to make sleep, a healthy diet and exercise a priority, according to a new study by DCU which reports that half of Irish farmers have problems sleeping and close to a quarter have experienced burnout. Farmers require energy and vibrancy to thrive. Being tired or 'below par' leads to poor decision-making and work becoming a grind. A recent study of Irish farmers, conducted by Dublin City University, found that almost one in four (24%) reported burnout and half (50%) had sleep issues. Burnout and poor sleep are associated with ...

Better livestock production improves family well-being and acts against climate change in Uruguay

How climate-smart practices are providing better incomes and a more resilient environment

Les facteurs de pénibilité physique au travail

Si l'enquête Conditions de travail permet d'objectiver les différentes formes de pénibilité auxquelles sont exposés les salariés dans leur travail, elle ne permet d'en mesurer ni l'intensité, ni la durée.

Qualitative Study to Explore the Occupational and Reproductive Health Challenges among Women Tobacco Farm Laborers in Mysore District, India

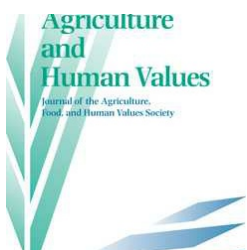

Tobacco farm laborers are primarily women and children working for very low wages. The aim of this study was to explore occupational and reproductive health challenges faced by women tobacco farm laborers in Mysore District, India. We conducted interviews and six focus group discussions among 41 women tobacco farm laborers. Codes and themes were generated based on deductive and inductive approaches using the socioecological model. Participants reported symptoms of green tobacco sickness...

Transforming labour around food? the experience of community supported agriculture in Italy

Abstract This study examines the strategies developed by Italian Community Supported Agriculture (CSA) initiatives to de-commodify, de-instrumentalise and de-monetise labour in their attempt to prefigure alternatives to dominant capitalist agri-food systems. To do so we answer the following research questions: What type of strategies do these CSA initiatives employ to that end? What insights can be gained as regards ...
