i2Connect Summer School on Becoming an Interactive Innovation Support Advisor successfully held in Ireland

The i2Connect Summer School, aimed at training advisors to become interactive innovation support advisors, took place this week in the scenic surroundings of Kildalton Agricultural College, Ireland. This comprehensive training programme, held during the week of July 22nd, brought together 24 participants from Greece, Hungary, Italy, Spain, Germany, and Ireland. The i2Connect project is about connecting advisors to boost interactive ...

Transformer les agricultures, le défi du financement (Episode 1)

Premier épisode de la synthèse des débats de la Conférence internationale de la Fondation FARM, de quelles(s) transformation(s) parlons-nous ?

Look after your health: Are you fit to farm?

One of this year's Farm Safety Week topics focuses on the question: 'Are you fit to farm?' This topic seeks to highlight the importance of taking time out to maintain good health and wellbeing, Francis Bligh, Teagasc Health and Safety Specialist, tells us more. Farming is a demanding occupation. It places large demands on the body - both mentally and physically - so maintaining good health and wellbeing must be prioritised. Farmers tend to ignore health warning signs at an early stage and 'work on'. However, health decline can take place ...

Webinaire : Méthode et outils d'accompagnement pour optimiser son organisation du travail en s'appuyant sur le collectif

... vendredi 6 septembre 2024 - de 12h à 13h - Idèle

The hidden dangers of working outdoors

As 'the great outdoors - the hidden dangers of working outdoors' is one of the themes being highlighted over Farm Safety Week, Francis Bligh, Teagasc Health and Safety Specialist, tells us of the many types of hazards farmers are exposed to. The outdoor hazards depends on the type of work, season, and duration of time spent outside. Farmers must think about their workplace hazards, including carrying out hazard identification and identifying ways to prevent and control exposure to hazards. Weather hazards may include working on very ...

'For every accident there can be about 10 near misses'

Day two of Farm Safety Week, an initiative organised by the IFA Family & Social Affairs Committee and supported by Teagasc, aims to promote awareness of the near misses occurring on farms and to encourage farmers to learn from their mistakes. Dr John McNamara, Teagasc Health and Safety Specialist, said that data from analysis of accidents indicates that for every accident there can be about 10 near misses. This knowledge provides everyone seeking to improve safety with the opportunity to learn from a near miss. "Think of all the ...

Top Ten Reads: Accelerating African Women's Leadership in Climate Action

Rice farmer Mary Seruuaa harvesting rice at a farm in Enyires, Atiwa District, Ghana African Women in Agricultural Research for Development (AWARD) has announced the Call for applications for a new career development Fellowship targeting women climate change professionals in Benin, Cameroon, Ghana, Kenya, Malawi, and Senegal. Teagasc supports Farm Safety Week 2024

22 July 2024 Teagasc supports Farm Safety Week 2024 Farm Safety Week is an opportune time to review safety standards and practices on your farm. As part of its Farm Health and Safety Programme, Teagasc will support this initiative again this year. Running from today, Monday, July 22 to Friday, July 26, Farm Safety Week 2024 is organised in Ireland by the IFA Family and Social Affairs Committee, which ...

Farm Diversification and Innovation - What are your Options?

20 July 2024 Farm Diversification and Innovation - What are your Options? Joanne Masterson, Teagasc Business & Technology Drystock Advisor, tells us that many farmers and rural dwellers are interested in enterprise diversification, and talks about the options available. There are countless possibilities when trying to identify a realistic option for generating additional household income. Farm ...

Agriculture is becoming increasingly complex: Improved advice can be part of the solution

Agriculture faces a number of challenges, both nationally and globally. Farmers must deal with the impact of climate change, reduce the emission of greenhouse gases, produce more feed and food, and adopt new technology and knowledge. At the same time, farmers must have reasonable financial benefits from their work. This problem was the starting point... The post Agriculture is becoming increasingly complex: Improved advice can be ...

Restitution de l'étude " Développer une offre de formation adaptée aux agriculteurs des Hauts-de-France : éclairages et bonnes pratiques à destination des acteurs de l'emploi et de la formation "

Présentation de l'étude Les élus du comité VIVEA Hauts-de-France observent, depuis 2019, une baisse du nombre de départs en formation. Ils ont donc décidé d'engager une étude visant à mieux comprendre les raisons de ce faible recours à la formation chez les exploitants de la région. Plusieurs pistes de réflexion ont été explorées : l'offre actuelle [...] The post Restitution de l'étude " Développer une offre de formation adaptée aux agriculteurs des Hauts-de-France : éclairages et bonnes pratiques à destination des acteurs de l'emploi ...

Positive mental health guidance for the farming community

A recently published leaflet 'Sowing Seeds of Support: Positive Mental Health Guidance for the Farming Community' aims to raise awareness about mental health issues in farming. Produced by Teagasc and Mental Health Ireland, it explores a number of practical coping strategies to manage stress reduction, places an emphasis on the importance of self-care, community connections and seeking professional help when needed. Farming can be challenging due to issues such as drought, fodder shortage and associated financial issues. There are many ...

Labour savings showcased at Teagasc/Aurivo Joint Programme walk

Farmers who attended the recent Teagasc/Aurivo Joint Programme walk on the farm of David Gannon, Kilconieron, Co. Galway, heard of his dairy farming story, the avenues used to secure labour and some of the labour saving techniques being used successfully on the farm. John McCabe, Advisor on the Teagasc/Aurivo Joint Programme, shares the key details. David is the Aurivo Focus Farmer for the area and has 170 cows. One of the main ...

Promoting the rights of migrants as workers

The protection of migrant workers in Europe is a topical issue. Over the past two decades we observed in Europe a change in the political and social climate. Political populism and the rise of extreme right-wing parties give more and more momentum to an anti-immigrant discourse. Trade unions across Europe are affected by these dynamics and by the impact they have on their members. As trade unionists it's time to reassert our fundamental values: a worker is a worker, whatever is his or her...

Labour on beef farms

In advance of BEEF2024, Teagasc completed an online labour survey of beef farms, which examined the level of off-farm employment, hours worked and some of the challenges arising in developing sustainable beef systems. One of the key drivers on beef farms that influences many of the decisions that are being made when it comes to the choice of beef system, stocking rate, type of animals purchased, age at finish and overall future direction for the farm is the amount of labour that is available to carry out the work involved. The majority ...

IFPA to emphasize high labor costs at Washington meeting | TheFencePost.com

The speaker will be President Dolphin from the South Australian Employment Tribunal. This ...

Will Labor-Saving Automation Save Western Agriculture?

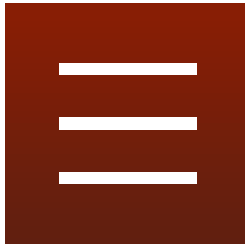

The 2024 AAEA Annual Meeting Track Session sponsored by the Specialty Crop Economics Section, "Will Labor-Saving Automation Save Western Agriculture?" will look at labor shortages and rapidly rising wages are threatening the commercial viability of labor-intensive specialty crop production in California and other western states. With the advent of AI and other technologies, automated systems to replace labor in key production tasks are increasingly attractive and generating substantial interest from both producers and venture capitalists. This session provides an overview of the adoption of these technologies thus far, the potential for future adoption, and the implications for reducing labor demand and improving economic efficiency in this important sector of U.S. food supply.

Presentations in this session:

- **Trends in Labor Saving Automation Adoption in California Agriculture**
Zachariah Rutledge, Michigan State University
- **Smart Labor-Saving Technology in Berry Harvesting**
Daniel A. Sumner, University of California, Davis
- **The Potential for Automation to Save Labor in Western Agriculture**
Bryan Lohmar, California Polytechnic State University

Transition écologique et genre: quelles transformations du travail?

Voici une pré-annonce pour un colloque que nous organisons sur le thème Transition écologique et genre: quelles transformations du travail? les 6 & 7 novembre 2024 à Lyon et en distanciel

Call for Papers

EMANES Annual Conference 2024 - before October 15, 2024

The EMANES Annual Conference 2024 offers leading and young academics, practitioners and policymakers the opportunity to discuss innovative research on a range of topics related to digitalization and economic transformation.

Travail et numérique. Ce que les technologies numériques font au travail et à l'emploi - avant le 31 juillet 2024

Ce colloque propose d'analyser les effets induits par l'usage croissant des dispositifs numériques et des nouvelles technologies sur les structures de l'emploi, les organisations du travail, les conditions de travail, ainsi que sur son articulation avec la vie privée. Il vise ainsi à faire le point sur les transformations induites en saisissant les interpénétrations multiples entre travail, emploi et numérique, à travers une grille de lecture intersectionnelle, en s'attachant à analyser la diversité des effets produits par la conception et l'utilisation du numérique en fonction des rapports de domination de classe, de genre, de race, d'âge ou de handicap qui traversent les organisations de travail et dans lesquels les individus sont pris. Il ambitionne également de favoriser le croisement entre différents regards disciplinaires, qui constituent une approche fructueuse pour mettre à l'épreuve la façon dont les usages des technologies numériques agissent sur le travail et l'emploi et s'organise autour des 6 axes suivants : Axe 1 : Le numérique comme outil de rationalisation du travail Axe 2 : Les dispositifs numériques comme instruments de mise au travail Axe 3 : Les effets des technologies sur l'articulation des temps sociaux Axe 4 : Les travailleur·ses du numérique Axe 5 : Flexibilisation de l'emploi à l'heure du numérique Axe 6 : Conditions de travail et santé à l'épreuve du numérique

Temps et rythmes du travail agricole - avant le 7 avril 2025

Ce numéro spécial de Temporalités souhaite explorer les temporalités agricoles, contemporaines et passées, en Europe comme dans le reste du monde. Celles-ci seront considérées dans leurs dimensions professionnelles en intégrant, dans la mesure du possible, les temps de la formation et de la retraite. On pourra également interroger l'articulation de ces temporalités avec celle(s) de la famille, de la santé, des engagements syndicaux ou associatifs ou encore celles des industries en aval et en amont. Les éventuelles différences de temporalités selon l'orientation de la production entre label biologique, agriculture dite raisonnée ou conventionnelle seraient également intéressantes à explorer pour chacune d'elles ou dans leurs combinaisons.

Repenser le travail des femmes dans le monde agricole à partir du care

Originating from the work of Carol Gilligan and initially focused on the question of gender, the ethic of care has benefited from analyses that have enabled it to reveal its heuristic potential in the field of the environment and agriculture. This article explores the way in which the notion of care is currently mobilized as an analytical category in feminist analyses of agricultural work, before looking at the way in which the notion is seized upon by women farmers themselves to account for their definition of work, in its elements of ...

Drivers of overseas labour migration, migration intensity, and destination choice among farming households in Nepal

Neither Healthy nor Safe: Insufficient Regulation of Occupational Health and Safety for Migrant Farmworkers in Europe

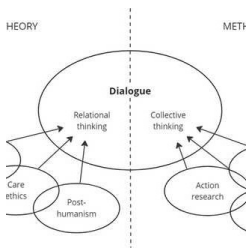

Weder gesund noch sicher: Unzureichende Regulierung des Arbeitsschutzes für ausländische Saisonarbeitskräfte in der europäischen Landwirtschaft

Ni sain ni sûr : une réglementation insuffisante en matière de sécurité et de santé au travail pour les travailleurs agricoles migrants en Europe

Castillo-Rojas-Marcos, J. and Molinero-Gerbeau, Y. (2024). EuroChoices.

Occupational safety and health (OSH) began to be regulated at the EU level with the OSH Framework Directive in 1989. Since then, many other legal acts and policies have followed, enriching the complex European set of legal tools and protections on work-related health and safety. However, they all share the same approach: only eventualities happening to workers in the workplace, during working hours and/or caused by their work tasks can potentially be designated as an OSH impact; and therefore be legally problematised and tackled. This paper argues that such an approach is insufficient for a sector like European agriculture, whose workforce is increasingly composed of migrant labourers.

Creating dialogues as a quiet revolution: exploring care with women in regenerative farming

Abstract Around the world, practitioners and academics are engaging in the rise of regenerative farming. On the margins of the predominant farming system, and often with little support and acknowledgement, regenerative farming is surprisingly persistent and represents a radical response to industrialization, ecological crises and alienation. This study uses feminist theories to grasp farmers' regenerative experiences ...

The everyday work of farm advisors as interface bureaucrats in greening French agricultural policies | Journal of Political Ecology

For the last three decades, public agricultural policies in France and in Europe have progressively integrated environmental objectives through a wide range of instruments. Whereas a large body of research has examined the extent to which the greening of agricultural policies has shaped farmers' decisions and practices, few studies have considered how these normative policy orientations may trigger tensions within the agricultural ...

'You don't want to be seen to be struggling'; identifying sociocultural barriers and facilitators for Irish farmers' mental health help-seeking - Firnhaber - 2024 - Sociologia Ruralis - Wiley Online Library

Farmers face significant mental health issues, including depression, anxiety and suicidal ideation. Additionally, rural populations widely endorse stoic values which can be a barrier to farmers' help...

Organic and Conventional Farmers' Mental Health: A Preliminary Study on the Role of Social Psychological Mediators

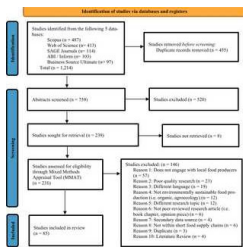

The study of farmers' mental health according to their production model (organic vs. conventional) suggests that organic farming was associated with better mental health than conventional farming. However, to our knowledge, no research has been conducted to examine the social psychological factors responsible for these differences. This research aims to investigate the role of job content and values on farmers' mental health according ...

The Role of Human Resource Management in Agricultural Labor-Saving Technologies: An Integrative Review and Science Mapping

The integrative role of human resource management continues to rise as a topic in sustainable and smart agriculture. This dual focus emphasizes new solutions for agricultural businesses and rural areas, incorporating academic concepts with practical implementations to address the pressing challenges coming from the implementation of labor-saving technologies. The study employs the integrative review method, along with science mapping of literature. After a careful selection of studies from the Scopus database, we included 149 papers for ...
