### Farmers urged to prioritise safety at calving

With data from the HSA showing that attacks by a cow with a calf account for a third of all livestock fatalities and cows with calves were involved in more fatal incidents than bulls over the 10-year period of 2014-2023, farmers have been urged to prioritise safety during the busy calving season. This message came from the Minister of State at the Department of Agriculture, Food and the Marine (DAFM) with special responsibility for Farm Safety Martin Heydon T.D., who said: "Calving is underway on many farms and the next few weeks will ...

### Workers and the climate challenge

For countless workers across Europe, there are two sides to the 'climate challenge'. This special report examines both in parallel. The first is climate change itself, and all the dangers it poses to workers' health. Aude Cefaliello tackles the hot topic of heat stress at work and the need for an EU-wide minimum protective threshold. Théophile Simon visits the south of France, where farmers are struggling with persistent drought, ...

## Con cambios veloces en el mercado laboral, ECOSOC de la ONU realizará una reunión en Santiago para avanzar en el futuro del trabajo digno para todos y todas

QUÉ Reunión Especial del Consejo Económico y Social de las Naciones Unidas (ECOSOC) sobre el Futuro del Trabajo El mundo del trabajo está experimentando una transformación sin precedentes actualmente a raíz de las tecnologías emergentes, la globalización, la movilidad humana y las tendencias demográficas. Estos cambios tienen el potencial de reestructurar los mercados laborales y los medios de subsistencia de miles ...

## Women Farmers Quantitatively Linked to Better Community Well-Being

UNIVERSITY PARK, Pa. — Having more women in agriculture is associated with greater community well-being, according to researchers at Penn State and the University of Wisconsin-Madison. Their work is the first to quantitatively assess this link, and their findings suggest that women farmers approach their operations in ways that positively impact their communities. The study, [...] The post Women Farmers Quantitatively Linked to Better ...

### Burnout in the barnyard

John McNamara, Teagasc Health and Safety Specialist, Siobhán O'Connor, DCU, and Emma Dillon, Teagasc REDP tell us how farmers are at risk from stress and mental exhaustion, A research team at Dublin City University (DCU) working with Teagasc and funded by DAFM, has been studying farmers' mental health. The team recently published a number of papers including 'A Review of Burnout issues among Farmers worldwide' and 'Alcohol & Substance use among the farming community in Ireland'. Teagasc regards farmer health as a key aspect of su...

### Beyond Pesticides: Advocating for Health Justice on Martin Luther King Day 2024

(Beyond Pesticides, January 12, 2024) As we commemorate Dr. Martin Luther King Jr.—an inspiration for taking on the challenges of justice, equity, and safety as a central part of all our work for a sustainable future—through a day that stands for equality, justice, and the pursuit of a better world, it is crucial to reflect on issues that impact the health and well-being of communities. One such issue that echoes the spirit of Dr. King's vision is the pervasive use of pesticides and the associated health risks. Drawing insights from prior ...

## Une nouvelle enquête montre que la santé mentale des travailleurs européens est de plus en plus menacée

Telus Health, fournisseur canadien de services de technologie de la santé, a mené une enquête mondiale sur les tendances en matière de santé mentale des adultes employés. Le rapport européen met en évidence un déclin de la santé mentale des travailleurs européens, 38 % d'entre eux étant exposés à un risque élevé de mauvaise santé mentale. Le rapport européen se concentre sur six États membres : France, Allemagne, Espagne, Pays-Bas, ...

## Global unemployment rate set to increase in 2024 while growing social inequalities raise concerns, says ILO report

Joblessness and the jobs gap have both fallen below pre-pandemic levels but global unemployment will rise in 2024, and growing inequalities and stagnant productivity are causes for concern, according to the ILO's *World Employment and Social Outlook: Trends 2024* report.

## CEPAL y OIT: bajo crecimiento económico de la región afectó el dinamismo de los mercados laborales durante 2023

Según una nueva publicación conjunta de ambos organismos de las Naciones Unidas, se observa que el aumento de la tasa de ocupación regional, registrado en 2022, se atenuó de manera importante en los primeros seis meses del 2023, y que la tasa de participación se redujo.

## How some farmers are achieving an average 8 hour working day on farm

06 January 2024 How some farmers are achieving an average 8 hour working day on farm  
Marion Beecher joins Emma-Louise Coffey on this week's episode of The Dairy Edge to discuss a recent case study of farmers who achieve an average 8 hour working day on their dairy farm throughout the year. Marion explains that in the study, farmers cited a compact, seasonal calving system as the key driver of their ...

## Being a woman with the "skills of a man": negotiating gender in the 21st century US Corn Belt

Abstract There has been broad interest in the so-called rise of women farmers in United States (US) agriculture. Researchers have elucidated the diverse ways farmers 'perform' gender, while also examining how engaging in a masculine-coded industry like agriculture shapes individuals' gendered identities as well as their social and mental wellbeing. While illuminating, this work is mostly focused on sustainable or direct-market farmers, with surprisingly little research examining women on conventional row crops operations. ...

## A dynamic, stochastic, Bayesian, provincial input-output model for the South African economy

Background: The green economy has long been important in public discourses, as has been the forecasting of macroeconomic phenomena. Aim: The purpose with this study was to construct a regional input-output model for the South African economy. Setting: The model is a coupled input-output/system dynamics model. It is dynamic in the sense that sector growth follows the 'limits to growth' hypothesis. The model is used to explore the impact on the green economy, and also on poverty indices. Method: It was constructed using Vensim®, a system dynamics ...

## Changes in Human Motor Behavior during the Familiarization with a Soft Back-Support Occupational Exoskeleton

Soft back exoskeletons are aimed at reducing musculoskeletal effort during manual handling tasks, contributing to the prevention of low back disorders like lumbar strains and sprains or intervertebral disk problems. However, large differences in their biomechanical effects are observed in the literature. A possible explanation could be the lack or disparity of familiarization protocols with the exoskeleton. The aim of this experimental ...

## Does Non-Farm Employment Promote Farmland Abandonment of Resettled Households? Evidence from Shaanxi, China

The de-agrarianisation of the labor force in the poverty alleviation resettlement (PAR) inevitably influences households' farmland management and farmland abandonment in the relocated areas. Drawing on survey data from 1079 households in Shaanxi, China, this study uses the Heckman two-stage model to empirically examine the relationship between non-farm employment and farmland abandonment in relocated areas. Additionally, ...

## Role of the neo-rural phenomenon and the new peasantry in agroecological transitions: a literature review

**Abstract** In the context of agricultural activity intensification and rural abandonment, neo-rurality has emerged as a back-to-the-land migratory movement led by urban populations seeking alternative ways of life close to nature. Although the initiatives of the new peasantry are diverse, most are land related, such as agriculture and livestock farming. A priori, neorural people undertake agri-food system activities ...
